STACK FLOOR SHELF

Please make sure the Stack Floor Shelves are correctly assembled before usage.

The Stack Floor Shelf is made of solid oak and walnut. Please note that wood is a living material changing imperceptibly over time. All wood reacts to sunlight, humidity, temperature and can vary slightly in grain pattern and coloration.

Use only warm soap water when cleaning the shelves. Use a hard wrung cloth and dry immediately with a soft dry cloth. The solid oak is treated with oil. If the surface of the wood dries out you might be able to restore its original glow using rapeseed oil. Apply a fine layer of olive oil to the product, dry immediately afterwards. The wood is likely to get a slightly darker colortone after applying oil. Please test on a small part of the shelf before applying olive oil to the entire unit. If in doubt, please consult af professional for advice on how to treat the wood.

Please stack and arrange the shelves carefully on top of each other.

Don't slide the shelves across the floor. This might scratch the floors surface and could cause the legs to break off.

Max load capacity on each shelf is 20 kg.

Don't climb, sit or stand on the shelf.
