HOUSE

The Publishing House for
Scandinavian Design.

A modular and versatile chair that combines progressive design and tradition.

An ergonomic allround chair with several different options to customise it for home, offices, conference centers and hotels. Designers Jesper Ståhl and Karl Malmvall was inspired by old-fashioned wood-chip baskets, combining a very economic use of material with the plaiting technique that provides a steady construction and makes it possible to shape the wood in a basket-like form.

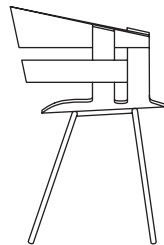

Please contact Design House Stockholm's Sales Division for full list of options for contract customers.
